
Poly Shark: Cal Poly's Work Flow Engine

Allan Saddi

Arlo C White

Darren Kraker

Ryan Matteson

Agenda

- Why we needed it
 - What is workflow
 - Design considerations / requirements
 - How we built it
 - How it's used
-

Why?

Workflow Pilot: Use Case

- Disability Resource Center
 - Alternate Testing Request

What is workflow?

- Workflow (process definition)
 - A series of activities performed by one or more participants to achieve a specific goal.
 - Activity
 - An action that needs to be performed to advance the workflow.
 - Participant
 - Person or system component assigned to an activity
-

What is workflow (cont)?

- Transition
 - Changing from one activity to the next
 - Work item
 - An instance of an activity assigned to a user to perform.
 - Formal parameter
 - Data that originates outside the workflow and is used to seed the process instance
 - Process variable
 - Data associated with the workflow that may be manipulated or viewed by participants during activities
-

Design Considerations

What do I need in a work flow engine?

- Arbitrary activities, e.g. run code, send email, wait for a manual response.
 - Activity deadlines/timeouts
 - Do something when a user fails to respond after timeout
 - Group assignment
 - Activities assigned to group, only one user needs to accept and complete
-

What else do I need in a work flow engine ?

- Process versioning

- Updating your workflow definition doesn't impact current workflows in progress

- Auditing and Administration

- Log all activities and process state transitions
- Ability to view or modify process instance

- Attachments

Technical Considerations

Technology considerations

- Java and open source
 - Modular design
 - Standards based, XPD L
 - Availability of tools
 - WebSphere friendly
 - Good documentation and support
-

Technology considerations (cont)

- Integration with uPortal
 - Standalone engine
 - Response and Action requests to external technology stacks
i.e Oracle, PeopleSoft
 - Client requirements
 - minimize jar file dependencies
 - Database compatibility (Oracle)
 - Database agnostic ORM
-

Contenders

- ObjectWeb Bonita <http://bonita.objectweb.org/>
- Enhydra Shark <http://shark.enhydra.org/>
- Open Business Engine <http://obe.sourceforge.net/>
- WfMOpen <http://wfmopen.sourceforge.net/>
- OSWorkflow <http://www.opensymphony.com/osworkflow/>
- JBoss jBPM <http://www.jboss.com/products/jbpm>
- Apache OFBiz <http://ofbiz.apache.org/>
- OpenWFE <http://www.openwfe.org/>
- Kualii <http://kuali.org/>

How we built it

Don't swim with Sharks

- Remote EJBs, CORBA, and SOAP
 - Shark native SOAP API
 - dependencies on Shark jars
 - not transactionally safe
 - each SOAP call is a transaction, problematic for multiple API calls
-

Hessian web service protocol

- Transparent
- Operations done on proxies
- Hessian clients for many other language
- Binary
 - Well suited for binary data

Poly Shark

Advantages of PolyShark API

- No Shark dependencies within the portal
 - Fewer jars to deploy, easier to manage
 - Transactions made safe across activities
 - single work units
 - call multiple APIs as needed
-

Disadvantages

- Need to constantly add functionality to the API that is already found in the Shark API
- Not as efficient as the Shark API
 - doesn't support result filtering at the server

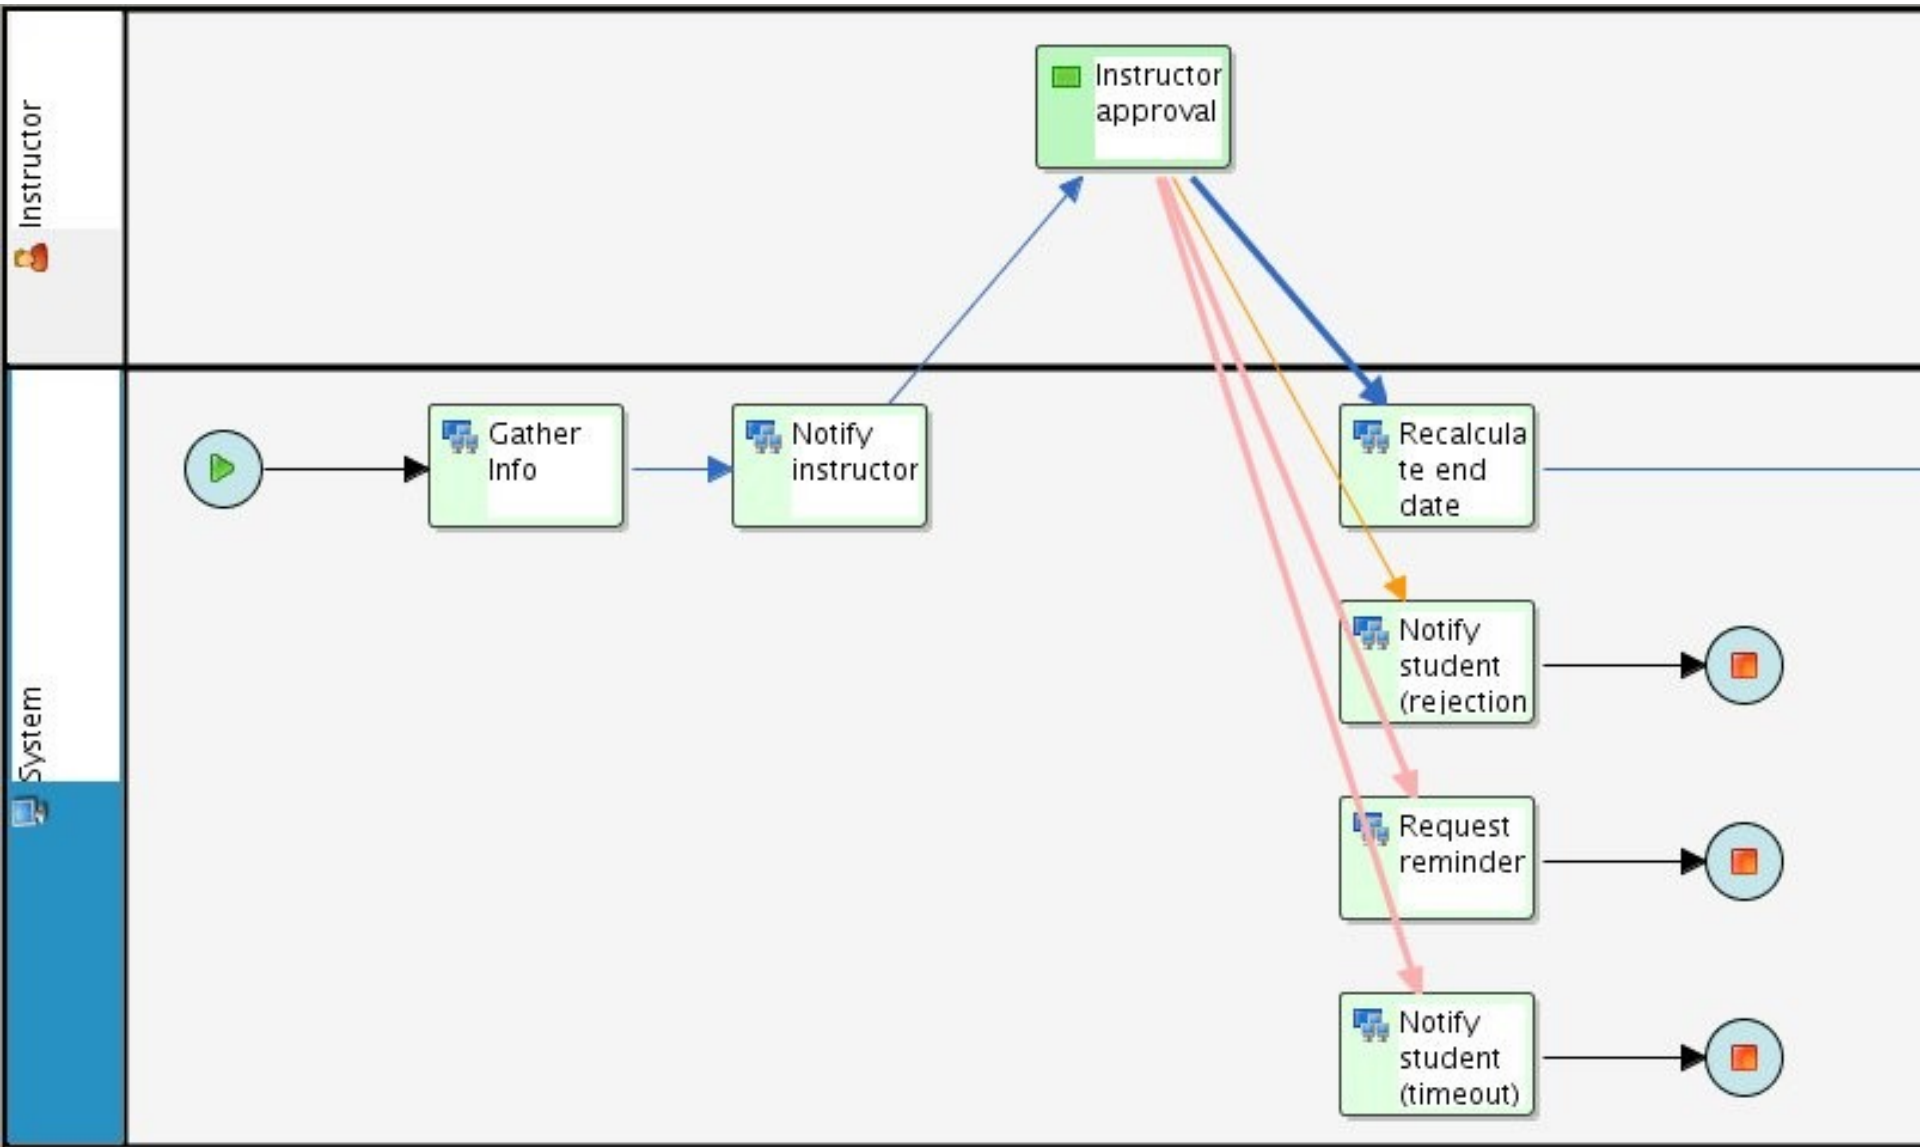

How to use PolyShark

- Define the process (process definition)
 - Collect initial data (formal parameters)
 - Manage the workflow
-

Define the process

- XPDL describes the process design
 - Participants
 - Activities
 - Transitions
 - tie activities together
 - Applications (Tool agents)
 - Something the server does, send email, insert into db
 - Creating a process always uses the latest version
 - effective dating on process definition
-

Enhydra JaWE

```
<Participant Id="instructor_part" Name="Instructor">
  <ParticipantType Type="HUMAN" />
  <ExtendedAttributes>
    <ExtendedAttribute Name="DynamicParticipant"
      Value="instructor_username" />
  </ExtendedAttributes>
</Participant>
```

```
<Activity Id="instructor_approval"
  Name="Instructor approval">
  <Description>
    Approve or deny this alternate testing request.
    If approved, supply exam delivery information.
  </Description>
```

```
<Performer>instructor_part</Performer>
<StartMode>
  <Manual/>
</StartMode>
<Deadline Execution="ASYNCHR">
  <DeadlineCondition>
    reminder_deadline
  </DeadlineCondition>
  <ExceptionName>REQ_REMINDER</ExceptionName>
</Deadline>
```

Collect data through web forms

- Custom XSL (formal parameters)
 - XForms
 - Comprised of separate sections that describe what the form does, and how the form looks.
 - Allows for flexible presentation options
 - Auto Generated form (Do nothing)
 - process variables already specified
-

Exam Information

This exam information has been filled with the default times for the class you selected. You should take the exam at the same date and time as the class unless otherwise agreed upon with your instructor.

 Final Exam (Check this box if this request is for a final exam)**Date of exam** [Why can't I choose the exam date I want?](#)

You are able to violate the 5-day requirement because you are a DRC Staff member. Students will be unable to submit requests for exams less than 5 business days away.

Allotted class time in minutes **Exam start time** **Exam end time****Time Requested in minutes**

Submit Request

Create Workflow

- Process required input
 - Create process instance
 - Work flows are versioned
 - Identifier for every process definition id
 - logical mapping of data elements
-

...

```
map.put("student_phone",  
    runtimeData.getParameter("studentPhoneNumber"));
```

```
WorkflowEngine workflowEngine =  
    WorkflowEngineFactory.getWorkflowEngine();
```

```
workflowEngine.createProcessInstance("dkraker",  
    "DRC_ALT_TESTING", map);
```

...

View my worklist

- Fetching / Manage work list
 - Process instance management
 - Remote web service API (Hessian)
 - get activity
 - get process creation date
-

```
WorkflowEngine workflowEngine =
    WorkflowEngineFactory.getWorkflowEngine();

processes =
    workflowEngine.getMyProcessInstances("dkraker"),
    "DRC_ALT_TESTING");

for (ProcessInstance processInstance : processes) {

    data.append(processInstance.getCreatedTime().getTime());
    ...
}
```

Dashboard

- **Worklist**
 - Display pertinent activities and status
 - **Forms**
 - Simple form submission of current forms
 - **My Processes**
 - List of previous and current activities
 - **Administrative**
 - Workflow level view of current or completed process instances
-

Exam Delivery Info

To Test Site*

Test needs to be available at least one day prior to exam

- Email to drctest@calpoly.edu
- Fax: 756-5451
- Instructor brings to DRC
- Student brings exam to test site
- DRC picks up from department office

Pick-up Information

Tests need to be at your department office by 2:00 PM at least ONE day prior to the exam date.
