- 2 uPortal JavaScript
- 3 jQuery and Fluid
- 4 Writing JS as a jQuery plugin
- 5 Portlet-specific concerns
- 6 Performance Recommendations
- 7 Resource server

# JavaScript

A brief definition.

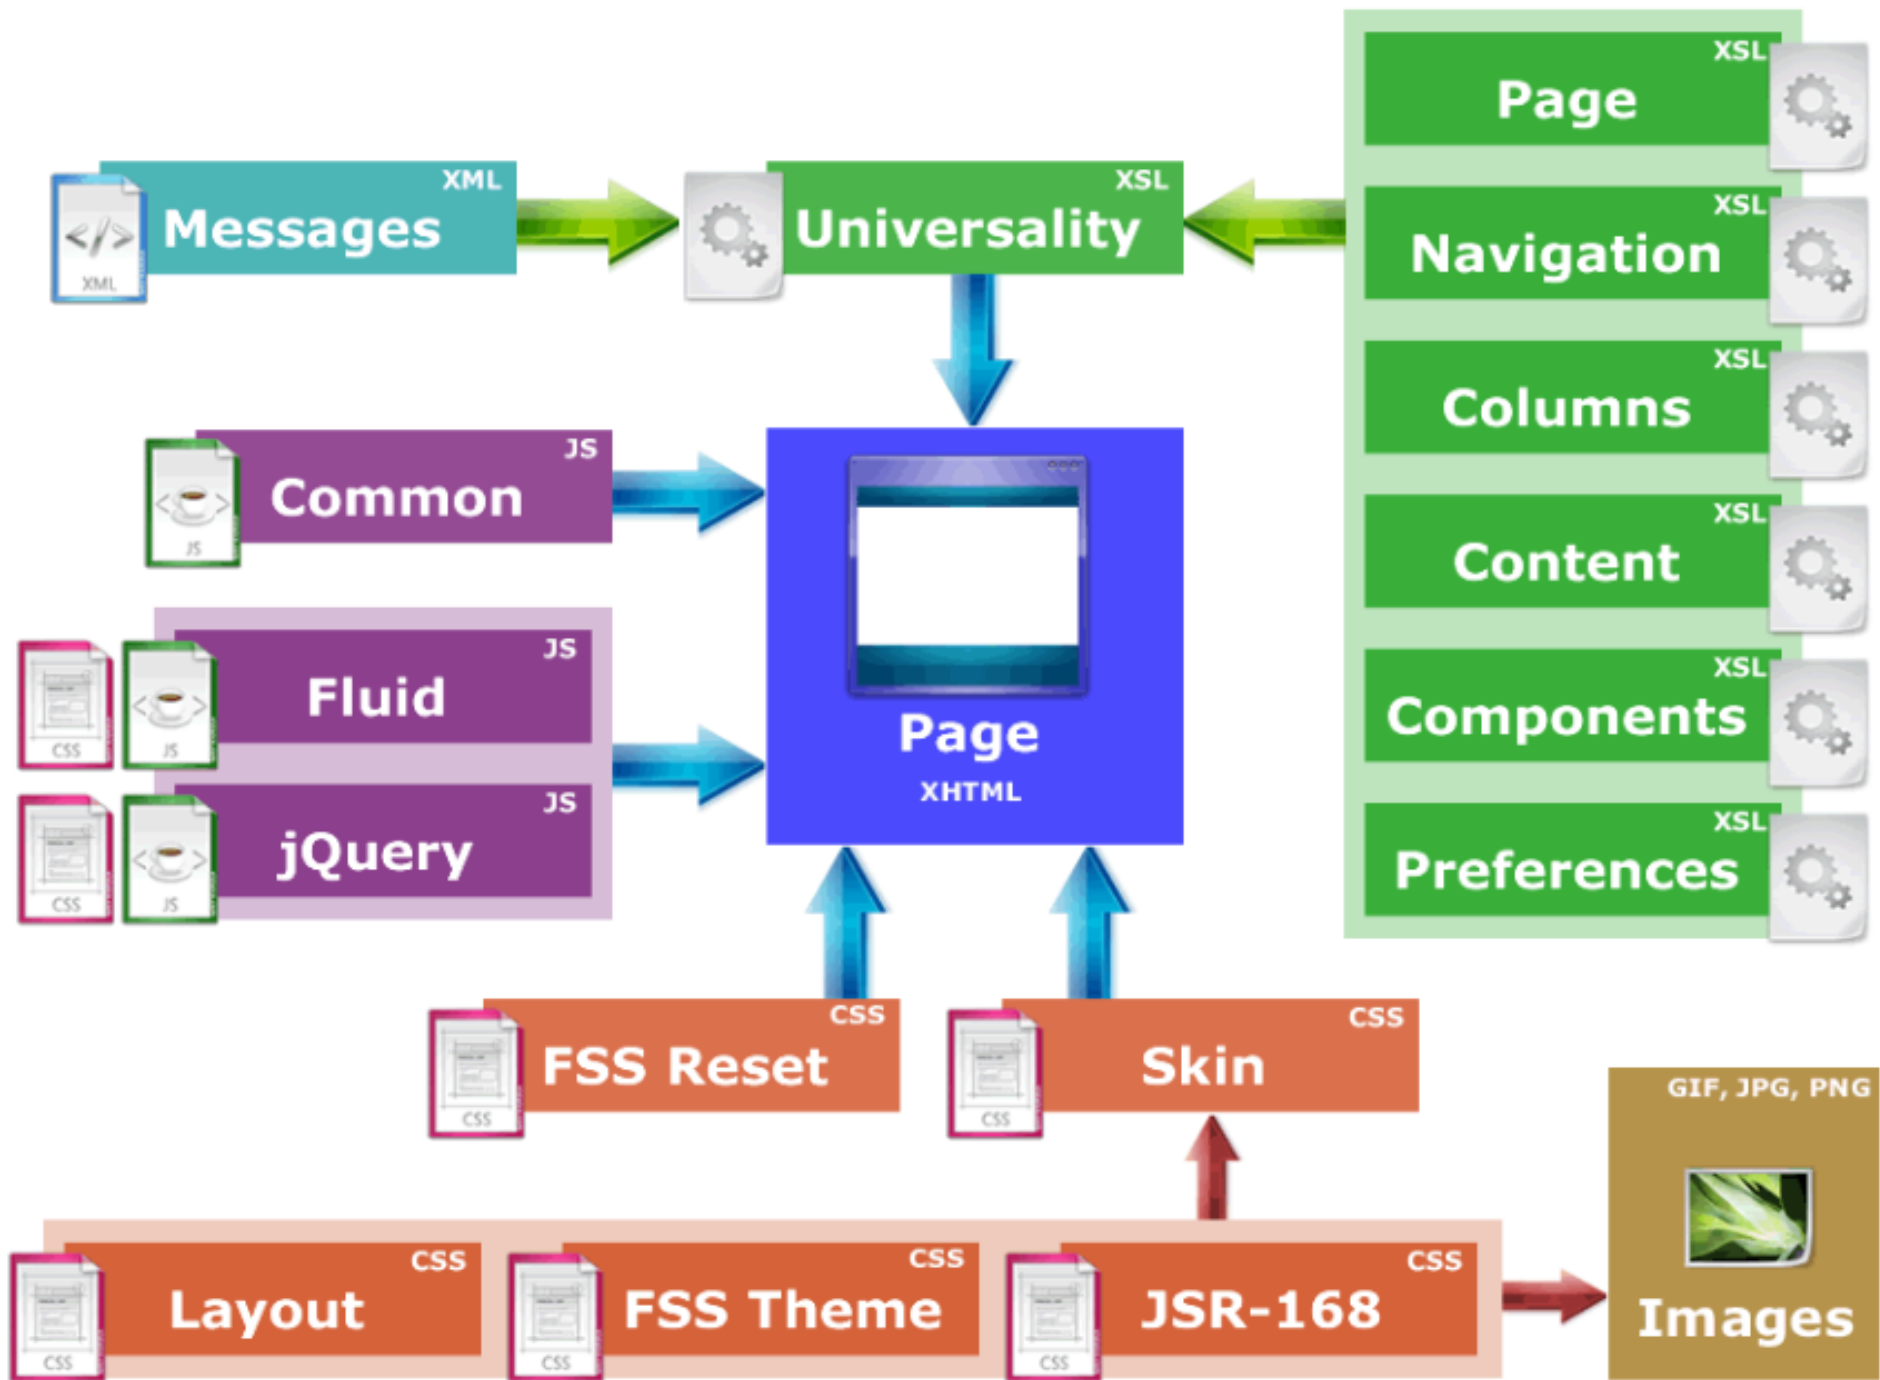

# Client-side Goodness

# uPortal JavaScript

Scripts native to uPortal.

3

# jQuery and Fluid

JavaScript libraries available to uPortal and portlets.

# jQuery

jQuery is a fast and concise JavaScript Library that simplifies HTML document traversing, event handling, animating, and Ajax interactions for rapid web development.

# 4

## Writing JS as a jQuery plugin

A few simple things to make your JS a standard jQuery plugin.

# Step 1 – Create a JS File

**jquery.[ insert name of plugin ].js**

**jquery.formatList.js.**

# Step 2 – Extend the jQuery object

```
01. $.fn.formatList = function( options )  
02. {  
03.   //Plugin code goes here.  
04. };
```

# Step 3 – Add Custom Alias

```
01.  /* Start: Closure */
02.  (function($) {
03.
04.  /* Start: Plugin */
05.  $.fn.formatList = function( options )
06.  {
07.  // Plugin code goes here.
08.  };
09.  /* End: Plugin */
10.
11.  })(jQuery);
12.  /* End: Closure */
```

# Step 4 – Add Loop

```
01.  /* Start: Closure */
02.  (function($) {
03.
04.    /* Start: Plugin */
05.    $.fn.formatList = function( options )
06.    {
07.    return this.each(function()
08.    {
09.    // Plugin code goes here.
10.    });
11.    };
12.    /* End: Plugin */
13.
14.  })(jQuery);
15.  /* End: Closure */
```

# Step 5 – Add Default Options

```
01.  /* Start: Closure */
02.  (function($) {
03.
04.  /* Start: Plugin */
05.  $.fn.formatList = function( options )
06.  {
07.  var defaults = {
08.  width: 170,
09.  background: "#efefef"
10.  };
11.  var options = $.extend( defaults, options );
12.
13.  return this.each(function()
14.  {
15.  // Place plugin code here.
16.  });
17.  };
18.  /* End: Plugin */
19.
20.  })(jQuery);
21.  /* End: Closure */
```

# Step 6 – Add Implementation Code

```
01.  /* Start: Closure */
02.  (function($) {
03.
04.  /* Start: Plugin */
05.  $.fn.formatList = function( options )
06.  {
07.  var defaults = {
08.  width: 170,
09.  background: "#efefef"
10.  };
11.  var options = $.extend( defaults, options );
12.
13.  return this.each(function()
14.  {
15.  // Define DOM targets.
16.  var li = $( this );
17.  li.addClass("format-list-item");
18.  var a = $('>.format-list-item > a');
19.
20.  //Apply CSS.
21.  li.css("width", options.width + "px");
22.  li.css("margin-bottom", "2px");
23.  li.css("list-style", "none");
24.  a.css("padding", "5px");
25.  a.css("display", "block");
26.  a.css("background", options.background);
27.  a.css("font-size", "90%");
28.  a.css("text-decoration", "none");
29.  a.css("border", "1px solid #999");
30.  a.attr("target", " blank");
31.  a.css("color", "black");
32.
33.  });
34.  };
35.  /* End: Plugin */
36.
37.  })(jQuery);
38.  /* End: Closure */
```

# Step 7 – Invoke the Plugin

```
01. <!-- DEPENDENCIES -->
02. <script src="js/jquery-
    1.2.6.min.js" type="text/javascript"></script>
03. <script src="js/jquery.formatList.js" type="te
    xt/javascript"></script>
```

# Step 7.2 – Write Markup

```
01. <h1>Format List Plugin Demo</h1>
02.
03. <!-- START: LIST -->
04. <ul class="format-list">
05. <li>
06. <a href="http://www.google.com/">
07.   <span>Google.com</span>
08. </a>
09. </li>
10. <li>
11. <a href="http://www.yahoo.com/">
12.   <span>Yahoo.com</span>
13. </a>
14. </li>
15. <li>
16. <a href="http://www.ask.com/">
17.   <span>Ask.com</span>
18. </a>
19. </li>
20. <li>
21. <a href="http://www.about.com/">
22.   <span>About.com</span>
23. </a>
24. </li>
25. <li>
26. <a href="http://www.msn.com/">
27.   <span>MSN.com</span>
28. </a>
29. </li>
30. </ul>
31. <!-- END: LIST -->
```

## Format List Plugin Demo

## Portlet-specific concerns

Things to keep in mind when using JS in portlets.

# Portlets: Unique Challenges

- Maintaining element ID uniqueness
- Unpredictable page contents
  - Portal theme
  - Other portlets
  - Proxied websites
- Multiple javascript libraries and library versions

# Ensuring unique element IDs

- Portlets may be added more than once to the same page
- `<portlet:namespace/>` tag
  - use to namespace element IDs
  - use tag in inline javascript or pass result to function
- Subscribe ID available in some legacy channels
- Need other solutions for webproxy content

# Using <portlet:namespace/>

```
<%@ taglib prefix="c"
uri="http://java.sun.com/jsp/jstl/core" %>
<%@ taglib prefix="portlet"
uri="http://java.sun.com/portlet" %>

<!-- Set the namespace variable -->
<c:set var="namespace"><portlet:namespace/></c:set>

<div id="{namespace}_mydiv"></div>

<script type="text/javascript">
$("#{namespace}_mydiv").html("Hello world!");
$.my.fn( {namespace: "{namespace}" } );
</script>
```

# Resulting HTML

```
<div id="Pluto_someId_mydiv"></div>
```

```
<script type="text/javascript">
```

```
$("#Pluto_someId_mydiv").html("Hello world!");
```

```
$.my.fn( { namespace: "Pluto_someId" } );
```

```
</script>
```

# Minimizing Library Conflicts

- Import necessary script libraries within each portlet
- Limit visible variables and method names and name them carefully
- Use jQuery no-conflict in extreme mode
- Make sure any other shared library variables are cleared

```
<%@ taglib prefix="c"
uri="http://java.sun.com/jsp/jstl/core" %>
<%@ taglib prefix="portlet"
uri="http://java.sun.com/portlet" %>
<script type="text/javascript" language="javascript"
src="/scripts/jquery-1.3.1.min.js"></script>
<c:set var="namespace"><portlet:namespace/></c:set>

<div id="{namespace}_mydiv"></div>

<script type="text/javascript">
var my = my || {};
my.jQuery = jQuery.noConflict(true);
my.jQuery(function() {
var $ = my.jQuery;
$("#{namespace}_mydiv").html("Hello world!");
});
</script>
```

# 6

## Performance Recommendations

Tips to keep your JS in top performance.

# Performance Suggestions

- Minify javascript and CSS resources
- GZip javascript and CSS
- Set long-lived expiration cache headers
  - trade-off between caching concerns and upgrade considerations
- Minimize HTTP requests

# Minifying Scripts

- Command-line tools
  - jsmin
  - YUI compressor
- YUI compressor maven plugin
  - Minify code as part of the build process
  - Combine files

# YUI Compressor Plugin

```
<plugin>
<groupId>net.sf.alchim</groupId>
<artifactId>yuicompressor-maven-plugin</artifactId>
<version>0.7.1</version>
<executions>
<execution>
<goals><goal>compress</goal></goals>
</execution>
</executions>
<configuration>
<excludes>
<exclude>**/*.min.js</exclude>
</excludes>
<linebreakpos>10000</linebreakpos>
<suffix>.min</suffix>
</configuration>
</plugin>
```

# GZipping and Caching Options

- GZip
  - EhCache filter
  - Tomcat and Apache
  - Jasig resource server
- Cache headers
  - Apache
  - Jasig resource server

# Resource Server

A new home for JS resources.

# Resource Server Basics

- Project goals
  - Web application for serving standard library files
  - Cache timeout filter
- Status
  - New Jasig sandbox project
  - 1.0.0 RC1 now available
- Current Usage
  - Bundled with uPortal 3.1

# Resource Server Web Application

- Independent web application
- Automatically deployed by uPortal 3.1
- Available for use by
  - uPortal
  - Portlets
  - other applications

# Resource Server Web Application

- Shared standard libraries
  - Javascript
  - CSS
  - Images
- All resources gzipped with appropriate cache headers
- Shared URLs for library resources

# Available Libraries

- jQuery
  - support for DOM browsing and manipulation
  - AJAX requests
- jQuery UI
  - rich set of components and effects
- Fluid Components
- Famfamfam silk icon set
- *<your-favorite-library-here>*

# Resource Server Library

- Includes

- JSP tag for resource retrieval
- Cache timeout filter
- Configurable GZip filter

- Technical details

- Builds on ehcache technology
- May be included as a maven dependency

# Using the Resource Server

- JSP tag library
  - file linked from the resource server if available
  - if unavailable, linked from project
  - allows compatibility with older versions of uPortal or other portals
- Cache header setting filter
- Configurable GZip filter

# Using the JSP tag

```
<%@ taglib prefix="rs"  
uri="http://www.jasig.org/resource-server" %>  
  
<!-- Import a script in the resource server -->  
<rs:resourceURL var="scriptUrl"  
value="/rs/jquery/1.3.1/jquery-1.3.1.min.js" />  
<script type="text/javascript" language="javascript"  
src="${resourceURL}" />  
  
<!-- Display an image from the resource server -->  
" />
```

# Filter Example

```
<filter>
<filter-name>SimplePageCchingFilter</filter-name>
<filter-class>
net.sf.ehcache.constructs.web.filter ➡
.SimplePageCachingFilter
</filter-class>
</filter>
```

```
<filter-mapping>
<filter-name>SimplePageCachingFilter</filter-name>
<url-pattern>*.js</url-pattern>
</filter-mapping>
<filter-mapping>
<filter-name>SimplePageCachingFilter</filter-name>
<url-pattern>*.css</url-pattern>
</filter-mapping>
```
